

## Video & Audio Player Software

DigiArchive is an “all-in-one” storage and retrieval solution for managed monitoring. It is designed for mission-critical applications that require instant access to digital content 24/7/365.

DigiArchive stores video indefinitely and allows precise, speedy retrieval when an incident requires review. Footage is shown to the operator in relevant time, date and categorised order so that events can be evaluated, and a recording given to third parties such as police and judicial authorities.

Files can be stored locally or remotely and are dragged and dropped into DigiArchive for back-up and visual reference alongside other data. For ease of use, thumbnails are matched against the video timelines for instant search and replay.

### Key Features & Tools

- Intuitive end-user interface
- Multi-viewing
- Multiple playback
- Export
- Administration
- Search across multiple archives
- Data lifecycle management
- Broad range of storage options and support
- Advanced Supported Configurations

### Sector Experience

#### Security

- Motorway Surveillance
- Urban Traffic Control
- Area Traffic Control
- Bridge and Tunnel Surveillance
- CCTV Systems
- Video Display Wall
- Public Address & Public Alarms Systems
- Supervisory Control
- Variable Message signs
- Passengers Terminals
- Network Monitoring

#### Broadcasting and Media

- Control Room
- Presentations and Overlay
- Point of Information
- Digital Signage
- Compliance
- Remote Monitoring

#### Other Sectors

- Transport
- Oil & Gas
- Power/Energy
- MOD/Emergency Services
- Government
- Retail/Leisure
- Corporate/Commercial
- Education.

## FEATURES & BENEFITS

---

### Easy end-user interface

A logical interface simplifies the retrieval of data, allowing users to easily view, compare, and export desired content.

### Search across multiple archives

Advanced search capabilities allow operators to access data from multiple archives, a feature that makes DigiArchive the ideal solution for crucial operations such as critical national infrastructure and transport hubs when content is needed instantly.

### Multi-viewing

Digital video content can be viewed at the same time in various locations. This feature is invaluable in allowing groups to collaborate on a project.

### Data lifecycle management

Archives can be reorganised, transferred or deleted by a given time or period, depending on corporate policy.

### Multiple playback

Video/audio content can be played back simultaneously and synchronously for analysis of recorded video/audio from different camera angles or locations.

### Broad range of storage options and support

Data can be archived on any type of storage medium, so enabling the administration of hundreds of millions of files.

### Export

Data can be archived in personal storage or in shared storage with the appropriate metadata information.

### Advanced supported configurations

CPU: Intel quad core  
RAM: 4GB  
Hard Drive Space: 2TB HDD  
Graphic Card: DVI Commell Motherboard  
Hard Drive Space: 1GB  
Operating System: Microsoft Windows XP Professional, Server 2003, Server 2008, Vista Business, Vista Enterprise, Vista Ultimate, 7 Professional, 7 Enterprise and 7 Ultimate operating systems (32 bit version)  
Additional software: DirectX 9.0 or higher, Microsoft .NET 3.5 framework SP1 or newer

### Administration

DigiArchive allows the end-user's facility managers to define the hierarchical structure and rules on retrieval policy for their own organisation.

## OTHER PRODUCTS

---

### DigiFend™

DigiFend™ is a specialist video and audio surveillance solution designed for security, event management and marketing analysis applications.

### FileSpy™

FileSpy™ is an automated file ingestion and workflow management application. It prepares media and metadata for ingestion to third-party or legacy DAM and CMS solutions.

### DigiLapse™

This is an 'all in one' box control solution for Rapid Deployment and Transportation aimed at public service vehicles, traffic monitoring and marine applications.

### Analytics

Sicura uses its own proprietary Intelligent Motion Detection (IMD) which exploits Intelligent Meta Data to detect and categorise appearance, disappearance and movement patterns of people, vehicles and objects.

### Development

Sicura's specialist software development team has extensive skills and experience across diverse applications and many areas of software integration.

### DigiLive™

An Integrated Server/Client IP Platform for video/audio, alarm and access control monitoring.

### Media Chronicle™

This suite of integrated application modules is designed for the management of media and data for delivery to broadcast, internet, mobile and IPTV systems.

### Specialist Services

Sicura provides a range of audio and video digitisation and metadata management services.
