

Display & Monitoring Software

DigiWall is an IP-based video wall display solution for control rooms, digital signage and remote viewing of many kinds. Users are able to view a comprehensive range of information and data sources including video footage, schematics and building management status.

The video wall allows users to view information and data sources locally or on global/remote networks. It can connect to a wide variety of media such as Video, Audio, I/O devices, Live Feeds, Presentations and Graphics.

DigiWall displays all sources seamlessly on Video Walls or work stations, operating as a stand-alone package or in conjunction with existing solutions. The product offers scalability and open-ended architecture, also functioning as a back-up recording system with options for 'Spot Recording' or the recording of live or pre-recorded sources. DigiWall operates on any standard PC or server, and is therefore an affordable solution for a spectrum of operations ranging from small commercial organisations to multi-national companies and government departments running critical national infrastructure.

Key Features & Tools

- Move & Go
- Workflow
- Collaborate
- Distribution
- Rapid Export
- Media Clipping
- Spot Recording
- Export
- Story Board
- Email
- Remote Access
- Live & Playback

Sector Experience

Security

- Motorway surveillance
- Urban traffic control
- Wide area traffic control
- Bridge and tunnel surveillance
- CCTV systems
- Video display wall
- Public address and alarm systems
- Supervisory control
- Variable message signs
- Passenger terminals
- Network monitoring

Broadcasting and Media

- Control Room
- Presentations and overlay
- Point of information
- Digital signage
- Compliance
- Remote monitoring

Other Sectors

- Transport
- Oil & Gas
- Power/Energy
- MOD/Emergency Services
- Government
- Retail/Leisure
- Corporate/Commercial
- Education.

SOFTWARE TOOLS

DigiWall 'Move & Go'

One of DigiWall's many unique features is the ability to 'Move and Go' any information source anywhere in any screen or segment of a screen with a single mouse click. Users are able to set up rules to manage events and sequences of events.

DigiWall Collaborative

End-users currently face increasing economic pressures and are demanding data convergence, single platforms and open protocols. It is no longer viable to share information within a single environment. Businesses and government operations need to be more efficient in the way they exchange visual information across an organisation. DigiWall offers this flexibility.

DigiWall Workflow

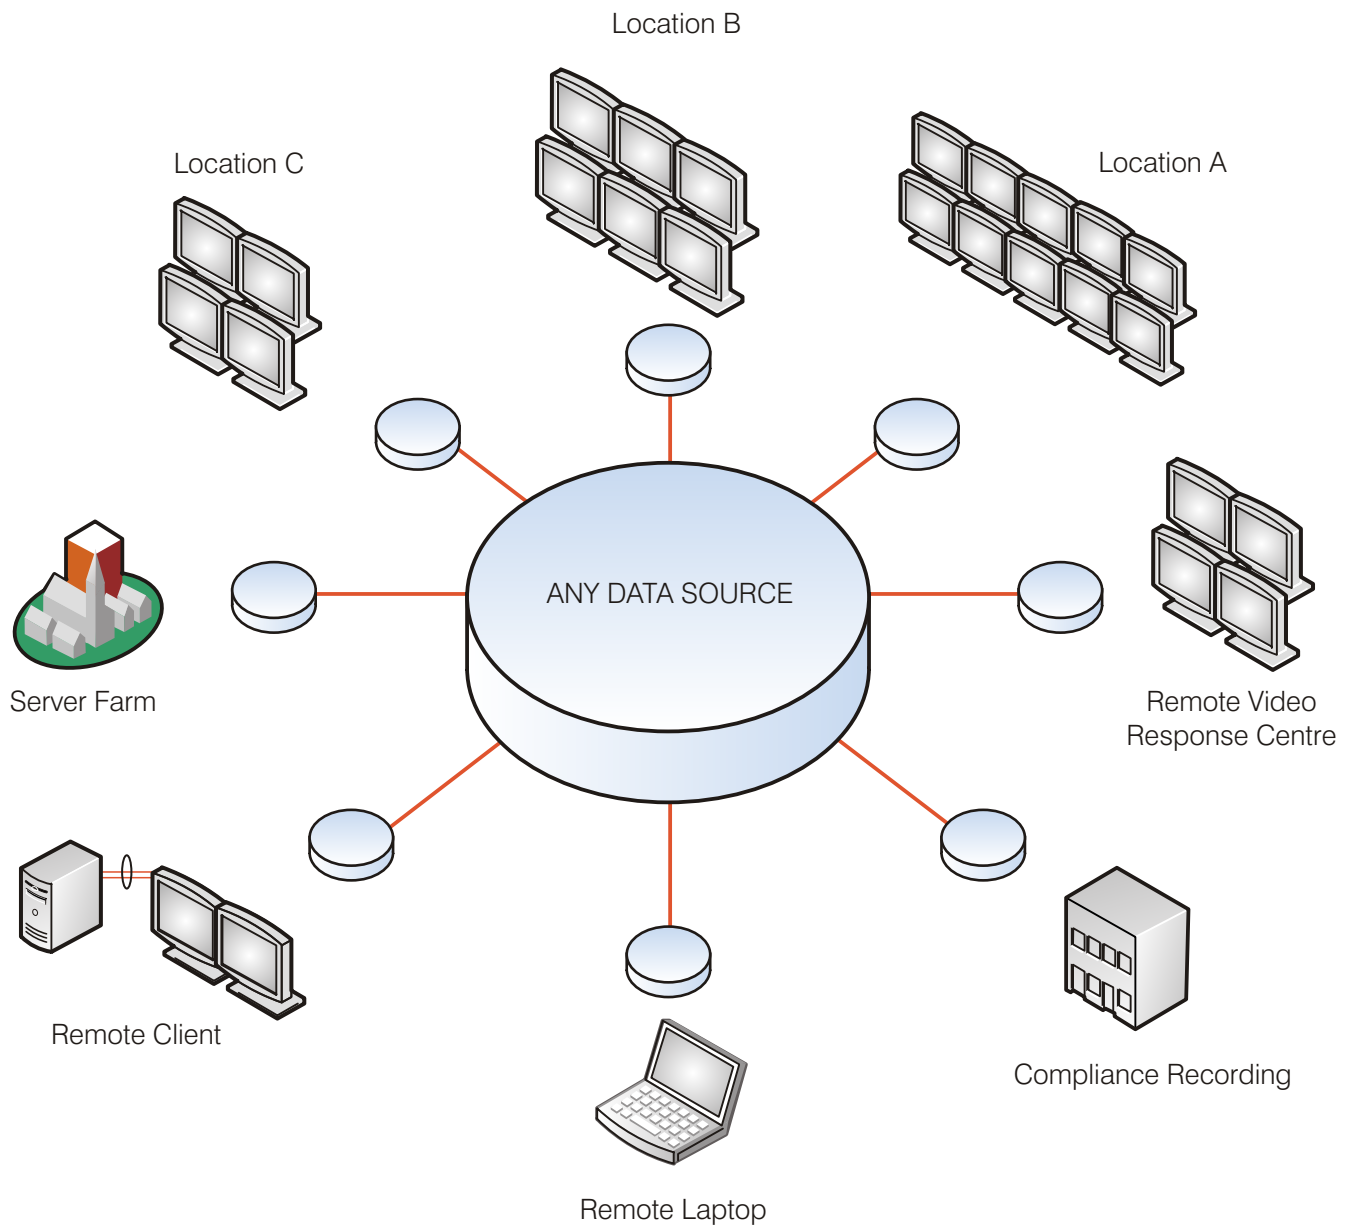

In situations where a customer's physical structure prevents use of a large screen or there are restraints in viewing data from a desktop, DigiWall's flexible architecture helps to manage workflow by showing surveillance footage, graphical information, statistics, general data and customised applications.

DigiWall RGB Distribution

Organisations frequently face the challenge of scaling or distributing RGB video across large video/monitor walls. DigiWall provides a solution with its ability to encode analogue computer video into an IP stream, so resolving the problems associated with costly analogue switch routing systems.

FORMATS SUPPORTED

OTHER PRODUCTS

DigiFend™

DigiFend™ is a specialist video and audio surveillance solution designed for security, event management and marketing analysis applications.

FileSpy™

FileSpy™ is an automated file ingestion and workflow management application. It prepares media and metadata for ingestion to third-party or legacy DAM and CMS solutions.
